Hypergeometric Model of Random Pruning Cliff
(a) LIBERO-Object
Hypergeom. model
(C=91, T=6)
Random pruning (observed)
Cliff zone
Cliff onset
k ≈ 0.94
Success Rate (%)
Keep ratio k
(b) Collapse Probability
Concentrated → sharp cliff
Object (C=91, T=6)
C=30, T=3 (moderate)
C=10, T=2 (distributed)
Distributed → gentle slope
P(collapse) (%)
Keep ratio k
