Experimental Pipeline and Factorial Design

$C(15, K)$ × 6 attacks per-item eval regression

15 Judges

6 families × 3 tiers

Panels

- K=3: 455
- K=5: 3,003
- K=7: 6,435

6 Attack Types

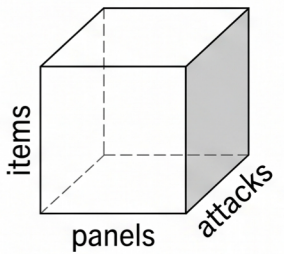

Targeted: prompt inj., score manip.

Shared-bias: sycophancy, verbosity, position, authority

× 2 benchmarks

= 12 conditions

ASR Computation

300 items/bench

Statistical Analysis

Log-log OLS

Fractional logit

Wild cluster bootstrap

→ $\hat{\beta}_{\text{std}}$ for K_{eff}, $\eta_{\max}$

Total: ~1.6M judgments across 2 benchmarks
