Quality Estimation
(Predicting Reliability)
Input x
LLM
N samples
S_J
Consistency Score
High S_J
High F1 ✓
Low S_J
Low F1 ✓
Monotonic correlation
Correlation -Selection Gap
AUROC ≈ 0.70
ρ ≈ 0.39
✓
Sample Selection
(Choosing Best Output)
Input x
LLM
N samples from same input x
y_1
y_2
y_3
Same score!
identical S_J
Instance-level signal
= same score for all y_i given same x
⇒ Cannot discriminate among samples
best-of-N ≤ greedy (NER)
Only logprob effective (RE)
