
(A) Global-correction bias: $\delta_s \cdot \Delta\tau/0.7$
$R^2 = 0.994$
0.01
0.02
0.05
$\Delta\tau$ ($\tau_{Z=1} - \tau_{Z=0}$)
$\delta_{\text{misclass}}$ ($\pi_B - \pi_A$)
Max |$\text{bias}_{\text{global}}$| (MC)
(B) Bias ratio: global vs. naive correction
Hurts: 52% of grid
debiasing helps
debiasing hurts
ratio=1
|$\text{bias}_{\text{global}}$| / |$\text{bias}_{\text{naive}}$|
