Finding
Evidence
Limitation
Training-Associated Exit Collapse
R^2 drops at exit layers after VLA fine-tuning
6/6 VLM → VLA conditions show Δ > 0.10; 0/4 VLA → VLA; 0/10 reference conditions
Correlational, not causal
Action-Relevant Sensitivity
Counterfactual perturbation reveals action-linked representations
Cohen's $d \geq 0.45$ across 8 trained conditions; empty ranks first in 6/8
d vs cosine metric incomparability
Inherited Instruction Attention Prior
L1 attention patterns inherited from pre-trained VLMs
Reference VLMs already show task-structured attention
Not causally tested
