Finding
Evidence
Limitation
raining-Associated Exit Collapse
R² drops at exit layers after VLA fine-tuning
6/6 VLM→VLA conditions show Δ>0.10; 0/4 VLA→VLA; 0/10 untrained
Correlational, not causal
Action-Relevant Sensitivity
Counterfactual perturbation reveals action-linked representations
Cohen's d ≥ 0.45 across 8 trained conditions; empty ranks first
d vs cosine metric incomparability
Inherited Visual Prior
L1 attention patterns inherited from pre-trained VLMs
Reference VLMs already show task-structured attention
Not causally tested
